

Social Franchise (SF) Report

Background

This report presents the trends of key program indicators in the Social Franchise in order to monitor performance levels of various contraception and family planning services to enable Marie Stopes and its partners to devise strategies to address any obstacles and ensure continuity of these services and improve their performance. This report is based on data analyzed from routine data collected in the MSI Connect reported by health facilities and CBDs. Reporting on population-level coverage uses the UBOS 2015-2030 population projection which includes refugees, and the appropriate age-group specific population estimates but no adjustments have been made in the MSI Connect. Therefore, population-level coverage needs to be interpreted with caution.

CYPS for 2022

The Best performance is observed in the month of July 2022 and the lowest performance is observed in the month of February 2022

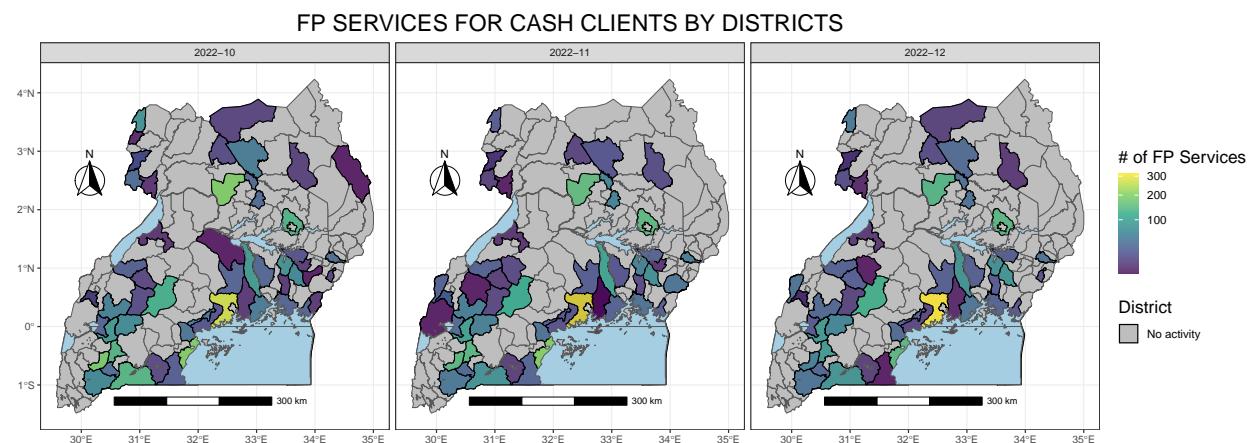

CYPs Breakdown

As observed from the figure below, most CYPs are coming from 3 Year Implant - IMPLANON, 5 Year Implant - JADELLE, 10 Year IUD Insertions, Intramuscular Injectable services 3 month, Subcutaneous Injectable Services 3 month respectively.

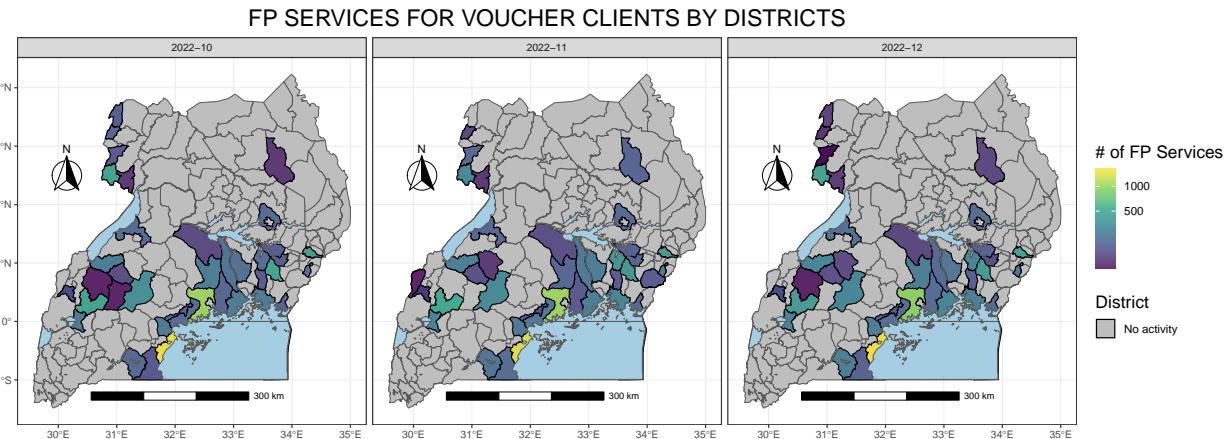

Geographic visualization
